PROFESSIONAL SUMMARY

Student at INSAT, passionate about full-stack development, DevOps, systems, and cybersecurity. Experience gained through various personal projects, open-source contributions, and algorithmic practice. Seeking an opportunity to develop my skills within a professional team.

EDUCATION

National Institute of Applied Science and Technology (INSAT), Tunisia <i>Engineering Degree, Industrial Computing and Automation</i>	2025 - 2026 <i>Tunisia</i>
National Institute of Applied Science and Technology (INSAT), Tunisia <i>Integrated preparatory cycle, MPI</i>	2023 - 2025 <i>Tunisia</i>

EXPERIENCE

aviralGarg05/NexumDB <i>aviralGarg05/NexumDB</i>	Nov 2025 - Present
- DevOps & CI/CD - Designed multi-stage Docker builds and GitHub Actions pipelines to automate publishing to Docker Hub on releases. - Security & Optimization - Integrated cargo audit for vulnerability scanning, added dependency files for reproducible builds, and implemented a dependency cache. - Impact: PR #30, PR #32, PR #41 (and 2 others)	

aopen-ug/conveyor <i>aopen-ug/conveyor</i>	Nov 2025 - Present
- Kubernetes Orchestration - Built a complete Helm chart for deploying Conveyor CI, including templates for Deployments, Services, ConfigMaps, and PersistentVolumeClaims. - Automated Publishing - Improved the helm-publish CI workflow to automate chart packaging and publishing to the artifact registry. - Impact: PR #161 (Feature: Helm Chart Packaging)	

siri1404/llm-infrastructure <i>siri1404/llm-infrastructure</i>	Oct 2025 - Present
- CI Security Pipeline - Architected a robust CI pipeline integrating Bandit for security linting, pip-audit for vulnerability scanning, and Mypy/Black for type safety and formatting. - Automated CD - Developed a continuous deployment workflow via GitHub Actions to build and push containerized LLM services to the GitHub Container Registry (GHCN). - Impact: PR #34	

Open-J-Proxy/ojp <i>Open-J-Proxy/ojp</i>	Oct 2025 - Present
- Distributed Transactions - Implemented XA (eXtended Architecture) support for Oracle Database to ensure ACID compliance and data integrity across distributed environments. - System Optimization - Improved proxy reliability by making the maximum incoming message size configurable, preventing memory exhaustion. - Impact: PR #149, PR #65	

GCP PAM JIT <i>GCP PAM JIT</i>	Sep 2025 - Oct 2025
Refactored CLI logic to support IAM requests at the Folder level alongside existing Project-level support. (PR #9)	

Domino (Erlang) <i>Domino (Erlang)</i>	Dec 2025 - Dec 2025
Optimized GitHub Pages deployment workflows via conditional execution and Pure Nix build integration. (PR #36)	

LinkShrink <i>LinkShrink</i>	Nov 2025 - Nov 2025
Improved system observability by integrating Prometheus metrics for tracking redirect statistics. (PR #5)	

Pariksha <i>Pariksha</i>	Nov 2025 - Dec 2025
Resolved critical null reference errors in React frontend components. (PR #48)	

ENGINEERING PROJECTS

dotfiles · Bash & Lua https://github.com/ignorant05/dotfiles	Jan 2025 - Present
- Full development environment configuration for Hyprland on Arch Linux. Includes custom setups for NeoVim, Tmux, and Bash, plus automation scripts and environment management tooling. Lua handles NeoVim plugin and editor optimization. - Skills: Bash scripting · Lua · NeoVim · Tmux · Arch Linux · Dev environment · Automation	

Uniflow · Go https://github.com/ignorant05/Uniflow	Dec 2025 - Present
A distributed CI/CD workflow orchestration platform, built in Go and designed to unify and manage pipelines across GitHub Actions, GitLab CI, and Jenkins.	

- Skills : Golang · GitHub Actions · GitLab CI · Jenkins · Bash · Docker

log-processing-system · Java

Jan 2026 - Present

<https://github.com/ignorant05/log-processing-system>

- A distributed Kafka-based log processing pipeline, deployed and orchestrated with Kubernetes and Helm charts. Designed for scalable, fault-tolerant ingestion and processing of high-volume log streams.
- Skills: Apache Kafka · Kubernetes · Helm · Distributed systems · Java · Log processing

simple-app · Python | <https://github.com/ignorant05/simple-app>

Mar 2026 - Present

- A containerized Python microservice with a fully automated CI/CD pipeline, built to demonstrate end-to-end cloud-native delivery on AWS. Packages and ships Docker images to ECR, orchestrates deployments to EKS via Helm, and provisions infrastructure with Terraform.
- Skills : Python · Docker · Kubernetes · Helm · GitHub Actions · Terraform · AWS (ECR · EKS · EC2 · IAM)

HTTP-Over-TCP · Go | <https://github.com/ignorant05/HTTP-Over-TCP>

Aug 2025 - Sep 2025

- A from-scratch replica of the HTTP/1.1 protocol built over raw TCP sockets - no frameworks or standard HTTP libraries. Implements request parsing, response formatting, and connection handling, mirroring real-world web server behavior at the protocol level.
- Skills: TCP/IP · Protocol design · HTTP/1.1 · Low-level networking

RegEx-Engine · C++ | <https://github.com/ignorant05/RegEx-Engine>

Jul 2025 - Jul 2025

- A regular expression engine built from the ground up - no standard regex library use Parses regex strings to identify patterns and groupings, compiles the conditions, then evaluates user input against them. Demonstrates strong understanding of string parsing, state machines, and compiler fundamentals. d.
- Skills: Parsing · State machines · Compiler design · Algorithms

scanme · Python | <https://github.com/ignorant05/scanme>

Oct 2024 - Oct 2024

- A network scanning tool built with Scapy, supporting multiple scan techniques including TCP, FIN, Window, and Stealth scans - enabling detailed network reconnaissance and host discovery.
- Skills: Python · Scapy · Network scanning · TCP/IP · Penetration testing · Reconnaissance

EyeOnDirs · Python | <https://github.com/ignorant05/EyeOnDirs>

Oct 2024 - Nov 2024

- A URL directory enumeration tool for web reconnaissance, designed to discover hidden paths and endpoints on web servers.
- Skills: Python · Web reconnaissance · Directory enumeration · Penetration testing

MindGathering · MERN / Go+MySQL / Spring Boot+PostgreSQL

Jun 2025 - Jul 2025

<https://github.com/ignorant05/MindGathering---Golang-MySQL-REACT>

- The same full-stack web application rebuilt three times across different backend stacks - MERN, Go with MySQL, and Spring Boot with PostgreSQL - as a deliberate exercise in mastering different architectures and comparing their tradeoffs.
- Skills: React · Node.js · MongoDB · Go · MySQL · Spring Boot · PostgreSQL · REST APIs · Full-stack · NGINX

InsideOut & InsideOut Website · Java · Thymeleaf · Javascript

Nov 2024 - Apr 2025

https://github.com/ignorant05/InsideOut_WebSite

- A compression and decompression tool paired with its public-facing website. Built with Java on the backend and Thymeleaf for server-side rendering, combining algorithmic work with a complete web interface.
- Skills: Java · Thymeleaf · Compression algorithms · Server-side rendering · Full-stack

LockItOut · Java · MySQL | <https://github.com/ignorant05/LockItOut>

Jan 2025 - Jan 2025

- A command-line tool for securely storing user credentials, with passwords encrypted before being saved to a database. Demonstrates practical understanding of encryption, secure storage, and credential management.
- Skills: Java · CLI · Encryption · Password hashing · Database · Security
